

RSD Folders

The next generation content archiving platform enables companies to manage and access unlimited volumes of legacy information.

New business requirements: archive and access an unlimited number of documents

The digital universe is doubling in size every two years and will multiply 10 – fold between 2013 and 2020 – from 4.4 trillion gigabytes to 44 trillion gigabytes.¹

The digital universe is huge and growing exponentially

This creates a challenge for IT organizations, as 85% of this volume must be managed following the best practices for storage, security, privacy and access. Documents not only include corporate reports but Microsoft Office files, PDF, AFP, photos, videos, etc.

¹ The Digital Universe of Opportunities: a 2014 IDC Research and Analysis

What is the value of information over time?

43% of the volume of information managed by a company needs to be protected due to ever growing compliance and regulatory requirements estimated by IDC.

Information related to Corporate Financial Data, Trademarks or Personally Identifiable Information are considered as such and enterprise document lifecycle management is required for record-retention compliance.

Solving the pains of high volume legacy information archiving.

Preserve the legacy information for the long term.

Manage multiple format and output streams and multiple sources of information.

Retrieve unlimited numbers of documents with constant response time.

Ensure secure access to legacy information from new applications.

Make the archiving process scalable, cost effective and easy.

It's time to rethink the way archives are built and used!

Application Decommissioning or Retiring the Mainframe: the challenge of legacy information

On average, the lifespan of an application is 5 years. Some regulations require companies to keep information as records for 20 years or longer. This means companies have to manage the archiving process of information generated by applications including those decommissioned.

Because most organizations change over time, comparative analysis between data in retired applications and new applications may be

impossible. Gartner advises to load, at most, 18 months² of data into the new application and electronically print all regulated documents. These documents can be loaded into an archiving platform. IT teams can implement secure archive solutions which support lifecycle management of output streams (with oversight from Legal and Audit to ensure compliance) that are easy and efficient to use.

How can RSD Folders help you?

RSD Folders is a software platform which can archive and access high volumes of legacy information whatever its format or source, for the long-term, at a low operational cost.

Folders Overview

- 1 Capture**
Ingestion of documents and reports
- 2 Index**
Identification and information classification
- 3 Security**
Encryption, Fingerprint Compression and user control
- 4 Archive Management**
Lifecycle management, Audit and Tracking
- 5 Search and Access**
Via web application, APIs or Web Services from any device

Folders allows companies to rethink the way they archive documents and output streams. Preserving information for compliance, tax, sales and retention requires an innovative platform. Our solution is scalable and flexible to adapt to technology standards and corporate archiving strategy.

What are the benefits of Folders?

Our solution is based on 45 years of experience RSD has been working with its customers on Document Archiving projects.

Open

- Open APIs and Web Services to facilitate integration
- Source and Format of information agnostic
- Document archive in its original format

Risk Management & Security

- Access Management, Audit and Compliance
- Electronic Signature & Archive sealing
- Lifecycle management until disposal

Easy

- One-Day implementation
- Limited administration through automated rules

High Performance

- High speed ingestion rates of large datastreams
- Constant response time not relative to database growth
- Scalability on high volume of archives

Cost effective

- Low implementation cost
- Innovative business model

How does it work?

The information is securely accessible anywhere, anytime and requires limited administration using automated rules based on information lifecycle.

Real-life examples of RSD Folders

RSD has solid experience with archiving solutions and implementations. The table below summarizes three case studies where customers leveraged RSD Folders to easily manage large volumes of information (millions of records) - archived for the long-term and quickly and easily accessed.

USE CASES	BENEFITS	KEY METRICS
Application Decommissioning	<ul style="list-style-type: none">• Long term archiving (20 years or more)• Multiple indexes• Full export guaranteed in the original format	Large document datastream ingestion rates: 376 doc/sec or 1,357,200 doc/hour
Business Application Archives	<ul style="list-style-type: none">• Automatic ingestion (single or dataflow)• No administration tasks• Based on API or Web Services• Transparent for the users	Transactions/day: 120,000 Access rates < 1 sec Documents. Archived: 75 Million
Secure Repository for Digital Mailroom	<ul style="list-style-type: none">• Access to documents from a single point• Document lifecycle• Security: user control, encryption, fingerprint• Search by index	Documents Archived: 30 Million More than 90 million indexes
